

Best-In-Class Construction Project Management Platform

Standardize and automate your construction projects

Managing information is a full-time job for many organizations; between emails, shared drives, and other disparate tools, tasks often fall through the cracks. While some companies might have some processes in place to help keep things in order, most lack a powerful online system that manages company standards and supports their efforts through automation.

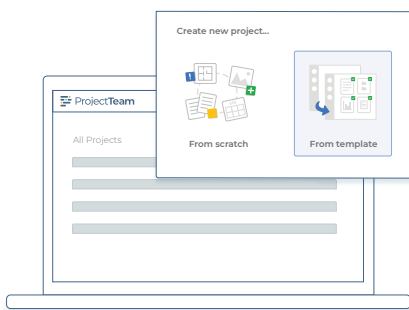

ProjectTeam is a leading construction management platform designed specifically for the owner, architectural, engineering and construction industry. ProjectTeam is built with the most modern and secure cloud technologies which means there is no software to install, updates to deploy, or physical hardware to manage. Your users can easily and conveniently access your project information from any device at any time.

How it works

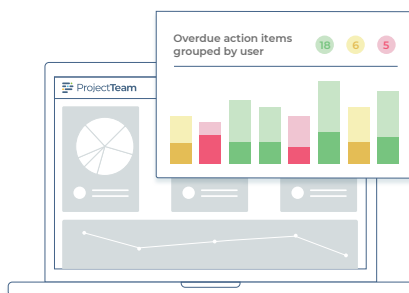

MOLD TO FIT COMPANY STANDARDS

ProjectTeam allows you to easily build upon the industry standard forms that come out-of-the-box. Administrators can add new custom forms or fields directly from the user interface to mold ProjectTeam to fit your company's unique needs.

GET STARTED FASTER WITH TEMPLATES

In ProjectTeam, users can quickly set up templates to help guarantee your team follows the company standard processes. Templates include custom forms, fields, workflows, user groups, folder structures, and more. All project data can be pulled into reports.

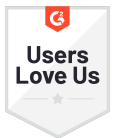

GAIN INSIGHT WITH REAL-TIME REPORTS

ProjectTeam comes with best-in-class report and dashboard tools to help you better manage your construction projects and teams. Effortlessly merge data such as action items, due dates, ball in court, average cost, and more into easy to read outputs.

- Requests for Information
- Requests for Proposal
- Specifications
- Submittals

Easy Customizations

- Custom form builder
- Drag and drop file uploads
- File markups/annotations
- Custom reports
- Custom dashboards
- Branded Print Templates

Dedicated support & training

- Call and email support
- Implementation training
- Video training library
- 24/7 online help center

Benefits of ProjectTeam

Investing in a project management system is a big deal and the wrong decision can have a disruptive impact on your organization. You need a platform that users enjoy logging into which maximizes your return on investment.

ProjectTeam has the best and most user-friendly features for the O/AEC industry. Below is a sample list of benefits included in ProjectTeam:

- ✓ **Maintain a single source of truth.** ProjectTeam allows you to create, edit, review, and collaborate in one secure and reliable platform. You can access your project information from anywhere on any device. That way, you are always up-to-date on what's happening in your organization and across your projects.
- ✓ **Streamline the document approval process.** When teams rubber-stamp paper documents or write "approved" via email, they don't have much visibility into the approval status. In ProjectTeam, forms such as Contracts, Change Orders, Submittals, and more can be automatically routed for approval, leveraging the intuitive looping functionality if a document gets rejected. All approvals are stored in the workflow activity log, so you never have to guess who approved what or when.
- ✓ **Improve project quality and minimize risk.** ProjectTeam helps your team plan and coordinate projects which lessens the chance of costly delays or even dangerous mistakes. Everyone on the project knows they can visit ProjectTeam to learn about important project notices and information. This way, your project managers can identify and deal with risks faster to avoid larger problems.
